

# VivoKey Spark Cryptobionic Implant

## PERSONAL IDENTITY

Protect and share your digital identity with your VivoKey Spark. Your VivoKey Profile is your secure digital identity that you control. Protected by the secure cryptographic capabilities of your VivoKey Spark, your profile will become your trusted digital identity online and in real world personal interactions.

## INTERNET SECURITY

AES128 authentication compliant to ISO/IEC 15693 with NFC phone readability and cloud connectivity.

## NETWORK PROTECTION

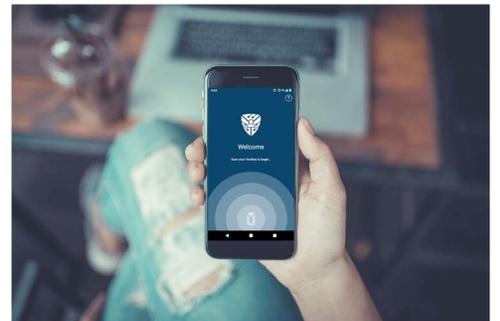

VivoKey Service Platform connectivity enables web APIs for standard IdP identity provider interfaces such as OAuth2, OpenID Connect, and others.

Unlike other NFC implants, when you upgrade yourself with a VivoKey Spark, you are joining a community of VivoKey members launching a new era of augmented humanity. The Spark is not a simple NFC implant, it is a secure link to the future. Your digital capabilities will keep expanding as the VivoKey Service Platform grows. With the Spark, you aren't just upgrading yourself, you are becoming part of the most advanced cryptobionic community in the world.

Move critical identity tokens like physical keys, identity cards, account credentials, and cryptographic keys off of vulnerable devices like computers, laptops, and mobile phones. Re-center your identity around you again, not your devices and account names.

- Easy to install, extremely small 2mm diameter, 12mm long design. Pre-loaded into EO gas sterilized injection system.
- Powerful cryptographic AES128 capability. More than encrypted data storage, the Spark actually performs encryption in vivo.
- Plug and play design, no programming necessary. Just install the Spark and scan with any NFC phone to get started.
- Web standard OAuth2 and OpenID Connect. Connect identity provider and chip scan validation APIs enable powerful account security and digital identity integrations with the VivoKey Spark.

The VivoKey mobile app scans your Spark to access your VivoKey Profile and secure services. Because your Spark is the heart of securing your identity, not the phone, you can install the VivoKey app on all your phones or even on a borrowed phone, and never worry about someone else accessing your identity.
